

Chemical Engineering: Admission with a HBO-diploma (Fast-track)

Prior education requirement

Admission to the Fast-track programme is granted on an individual basis by the Admissions Board on the basis of the documents you supply. Usually, admitted hbo-students with a relevant degree have to fulfill a programme of approximately 30 ECTS, divided over one academic year (September - August). After successfully finishing the Fast-track programme and obtaining the hbo degree, and satisfying the English language requirement (see elsewhere on this website), you can start the master programme in the following academic year.

The following types of qualifications from a university of applied sciences are usually sufficient:

- Chemical Engineering

Content Fast-track programme

Important course units, which are usually part of a Fast-track programme, are:

- Advanced course in organic chemistry or biochemistry
- Advanced course in polymer chemistry
- Advanced course in physical transport phenomena
- Advanced course in multi-phase reactors or heterogeneous catalysis
