

## Additional variable definitions for PWT 6.3

yEKS—GDP per capita relative to the US (=100) estimated by the EKS aggregation method as described in "[What's New in PWT 6.3?](#)"

yCPDW-- GDP per capita relative to the US (=100) estimated by the weighted CPD aggregation method as described in "[What's New in PWT 6.3?](#)"

rgdpl2—This variable is described more fully in "[What's New in PWT 6.3?](#)" rgdpl2 is a constant price extrapolation of Domestic Absorption (DA) from 2005 to earlier and later years. It uses the national growth rate of DA as the basis for the extrapolation. As in rgdpl, the net foreign balance is added to the DA to obtain rgdpl2.

rgdpl2wok-- rgdpl2 divided by number of workers. Fuller definitions of worker and other labor measures provided in "[What's New in PWT 6.3?](#)"

rgdpl2pe-- rgdpl2 divided by number of persons engaged in work.

rgdpl2te-- rgdpl2 divided by number of persons counted in total employment.

rgdpl2th-- rgdpl2 divided by number total hours worked.

grgdpl2—Annual growth rate of rgdpl2.
