

MSc Pedagogical Sciences: Deafblindness

Which theoretical and methodological tools are useful to analyze communication between people with deafblindness and their communication partners? Which assessment procedures can be developed in order to evaluate cognition, interaction and communication? How can staff training improve tactile sign language acquisition?

These kind of questions are addressed in this Master's degree programme in Educational Sciences: 'Deafblindness'. It is an international programme within which you acquire theoretical and methodological skills enabling you to analyze and research development and learning of individuals with complex disabilities. You will be taught and supervised by international experts. This is the only master's programme in the world focussing on education and support of people with deafblindness.

Field of research

- domains for research are concentrated on the topics of development, learning, social participation, education and support of people with deafblindness
